# Intelligent Document Processing

## WITH WATSONX.AI

### Transforming Document Processing with AI

Salient Process is excited to announce a new capability that allows organizations to extract structured content from any document using **IBM Business Automation Workflow (BAW) and watsonx.ai.** This offers an alternative to traditional OCR approaches, and the results are very compelling.

## Benefits

### Improved Accuracy
Improved accuracy, with some documents achieving 100% accuracy.

### Minimal Training
Minimal to no training or setup required to extract the required fields.

### Cost Effective
Cost-effectiveness with expenses as low as fractions of a penny per document.

### Secure
Using the watsonx.ai environment with choice of LLM adds a layer of trust and governance.

## Advantage

This can be implemented immediately and is provided in a plug-and-play toolkit for IBM BAW.

The setup is as simple as installing the toolkit and specifying the fields that should be extracted and the PDF or text document. The output is a list of the field values.
